

Page 10- Operation Andrew

The operation to get my shunt was a little scary, but I was asleep and didn't feel anything. When I woke up, my head didn't hurt anymore. The shunt goes in the top of my head, and then the tubing stretches all the way down to just below my belly. This will help to move the fluid away from my head. Complete the maze to see how my shunt goes all the way through my head! be sure not to take any wrong turns!
